Panel construction

Kronotex laminates consist of at least four stable layers which ensure the extraordinary durability and unique quality of Kronotex floors.

- A** The top surface of the flooring consists of a specially resistant protective overlay film. This is fused with an attractive resinated decorative film into a practically abrasion-proof, hardwearing surface.
- B** Extremely dense HDF fiberboard forms the supportive core (HDF, E1).
- C** On the undersurface of the core a dampnessimpeding stabilization film ensures and preserves the high structural stability of Kronotex laminates.
- D** Selected floorings are fitted with an additional Sound Design underlay to minimise footprint and ambient noise.

1. A laminate floor's resistance to wear is given as an abrasion class, e.g. AC 5. Here, the number 5 indicates that it will not show signs of abrasion for a considerable length of time. The wear class figure indicates the level of use for which the laminate is suitable. 32 represents average commercial use and 33 is for heavy commercial use.

2. All floors use the CLIC system. Simple to lay with no need for a hammer, tapping block and crowbar. Safe and stable, you can walk on them right away.

3. These panels have a 45° bevelled edge all the way round. Putting them together creates a V-shaped groove, which replicates the character of natural wooden floorboards.

4. Decors with this symbol are antistatic.

Villa

If timeless elegance and a hint of glamour is just your style, if you like to keep things classical and value quality without compromise, then have a look at the VILLA collection. With the elegant look of real wood and instinting in quality, this floor is one of the stars of our current range, no matter whether you just want to enjoy this exclusivity yourself or are looking for a stylish all-rounder for your business premises.
